Dev Setup Guide

Parfum — Local & Network Configuration

Project: Bloom Parfums Date: March 7, 2026 Stack: Next.js 14 + Laravel

Dev Setup — Local & Network Access

Your current IPs

Access	URL
Local (this PC)	<code>http://localhost:3000</code>
Network (Wi-Fi — phone / tablet)	<code>http://192.168.1.41:3000</code>

⚠️ If your Wi-Fi IP changes, update it in:

- `frontend/.env.network` → all `192.168.1.41` occurrences
- `backend/.env` → `FRONTEND_NETWORK_URL`

Check your current IP with:

```
Get-NetIPAddress -AddressFamily IPv4 | Where-Object { $_.IPAddress -notlike "127.*" -and
```

1 — Start the Backend (Laravel)

Open a terminal at `backend/` and run:

```
# Normal (localhost only)
php artisan serve --port=8000

# Network mode (accessible from phone / other PC on the same Wi-Fi)
php artisan serve --host=0.0.0.0 --port=8000
```

API is available at:

- `http://localhost:8000/api`
- `http://192.168.1.41:8000/api` ← from any device on Wi-Fi

2 — Start the Frontend (Next.js)

Open a **separate** terminal at `frontend/` and run:

```
# Normal dev (localhost only)
npm run dev

# Network mode (accessible from phone / other PC on the same Wi-Fi)
npm run dev:network
```

Site is available at:

- `http://localhost:3000`
- `http://192.168.1.41:3000` ← from any device on Wi-Fi

How it works

Script	Env file loaded	Host binding
<code>npm run dev</code>	<code>.env.local</code>	<code>localhost</code> only
<code>npm run dev:network</code>	<code>.env.network</code>	<code>0.0.0.0</code> (all interfaces)

The backend CORS config (`backend/config/cors.php`) reads `FRONTEND_URL` and `FRONTEND_NETWORK_URL` from `backend/.env` and allows both origins automatically.

Quick start (Network mode — both servers)

Terminal 1 — backend:

```
cd backend  
php artisan serve --host=0.0.0.0 --port=8000
```

Terminal 2 — frontend:

```
cd frontend  
npm run dev:network
```

Then open `http://192.168.1.41:3000` on any device connected to the same Wi-Fi.
